EXECUTIVE SUMMARY · ONE PAGE

Move the standard service to a machine-assisted process, and keep the judgement work priced as it is

A strong position in a market that stopped growing, and two competitors now quoting a price we cannot match at today's cost base. This closes the gap on the volume that is actually at risk, without touching the work clients pay a premium for.

The standard service, where price is the only criterion left

EUR 12 m
THREE YEAR TARGET
From a market of 840 m, with every step shown at right

1 quarter
TO REVERSE
The pilot stops at the Q3 gate and the manual process stays

Why this, and why now

- Margin has fallen four years running, and the cause is cost per engagement rather than price or mix. Hours per standard engagement are up, review loops account for most of the rise.
- Two competitors moved first. Their quoted price is below our cost on standard work, which takes the next renewal cycle with it unless the cost base moves.
- The judgement work is not under the same pressure and should not be touched. Repricing it would trade a defensible margin for a contested one.

What it costs

ITEM	YEAR 1	STEADY STATE
Build and integration	180,000	—
Licences	46,000	46,000
Training and change	38,000	12,000
Run and oversight	24,000	31,000
Total	**288,000**	**89,000**

Where the 12 m comes from

What could go wrong

Adoption. The model moves the answer more than any other driver. The pilot measures it on one region before the rollout commits anything.

Data. Labelling the back catalogue is the long pole and starts first, which is why nothing else can begin in Q1.

Quality. A machine-assisted standard service is still our signature on the file. Review stays human and the Q3 gate is a quality gate, not a cost gate.

THE ASK

Approve the pilot budget of EUR 288,000 and the Q3 gate. Nothing beyond the pilot is decided today.
